

PureSun™

SYLVANIA

Next generation lamp technology

For deeper, longer-lasting tans

SYLVANIA

Your global partner for full spectrum lighting solutions

We are Havells Sylvania, one of the world's major lighting groups. We strive to improve the way people live by enabling them to enjoy better lighting in a more sustainable manner. Today, we continue to build on our exceptional reputation as an innovator and creator of high-efficiency, energy-saving, light sources and luminaires, by providing full spectrum lighting solutions tailored to individual needs.

The Sylvania brand is part of the Havells Sylvania Group and is one of the world's largest manufacturers of artificial light sources. It has a broad product offering that includes incandescent, halogen, CFL, HID and LED lamps, alongside various specialist lamps for specific applications segments such as sun tanning, germicidal, agricultural and entertainment.

European manufacturing and logistics centres in France, Belgium and Germany ensure high quality and fast delivery to every customer. Sylvania lamps are distributed from stock, through national sales operations, as well as via individual countries' professional distribution channels such as wholesalers, specifiers and installers; as well as to the consumer via the retail channel.

Tienen – Belgium

Erlangen – Germany

A new dawn for tanning

We have been making tanning lamps for more than 30 years. Today, our manufacturing facilities in Germany and Belgium are putting all that experience, innovation and support into making the highest quality tanning lamps on the market.

Tanning lamps create ultraviolet light, the main source of Vitamin D, which the body needs for healthy bones. The sun is a natural source of UV but it is hard to control exposure to sunlight even when the weather and life allow.

PureSun lamps are designed to be a safe alternative to natural sunlight. Our clever design not only improves performance but also helps us reach environmental targets.

With our manufacturing base in Europe, we are well equipped to deliver our innovative, best-in-class products, respond quickly to demand, and offer all our customers the very best service.

PureSun™

Improving standards by association

We are proud to be a member of the European Sunlight Tanning Association (the ESA) as part of our role in maintaining standards and promoting responsible tanning practice.

Our new PureSun tanning lamps contain very little mercury – just 10mg – significantly less than the amount needed to ensure that they comply with the European Directive known as ROHS.

ESA – European Sunlight Association

More UV output and longer life

Sylvania has created the best tanning lamps on the market by identifying three opportunities for design improvement.

UV phosphor – only the best is good enough

Our new PureSun range uses advanced materials and technology to provide both an improved tan for the customer and a longer life lamp for the salon owner. The choice of phosphor is crucial to PureSun's success. Our secret lies in selecting phosphor with the ideal UVA/UVB ratio for direct and indirect tanning.

In addition to this, we use a high-tech process called Chemical Vapour Deposition to ensure the purity of the phosphor in each lamp, resulting in a reduction in UV loss over time.

Mercury content – less than 10mg

The Mercury (Hg) discharge is the engine that determines the efficiency of the lamps. Without Mercury the lamp switches off, but if there is too much Mercury the UV output of the lamp does not become stable and cannot reach its maximum UV output. This phenomena is what you experience as uneven 'colour' and is often called a 'dull effect' by end users.

Sylvania can fill all T12 sun tanning lamps with a precise amount of Mercury – less than 10mg – using a unique, patented method. EU environmental legislation requires less than 15mg of Mercury – so our lamps are well below this limit.

Advanced manufacturing ensures gas purity inside each lamp

The advanced technology that goes into PureSun lamps includes manufacturing processes designed to ensure a top quality product. For example, we use the world's fastest T12 lamp manufacturing line, which is fully automated to avoid human error.

And, unlike our competitors, we use a method called 'horizontal exhausting' to ensure that the gas in our lamps is free of impurities. With 30 years of development history, these are the longest lasting lamps we have ever made.

The manufacturing production line in Erlangen, Germany.

A breakthrough in tanning technology

Even the best conventional tanning lamps lose performance very quickly, which means less effective tanning sessions and a frequent replacement. After 18 months of research and development, our experts have found the answer.

The problem with ordinary tanning lamps

The problem with ordinary tanning lamps is that the UV they produce drops dramatically after a very short time.

Typically 10-15% in the first five hours of use.

That means tanning sessions have to be longer to achieve the same skin results.

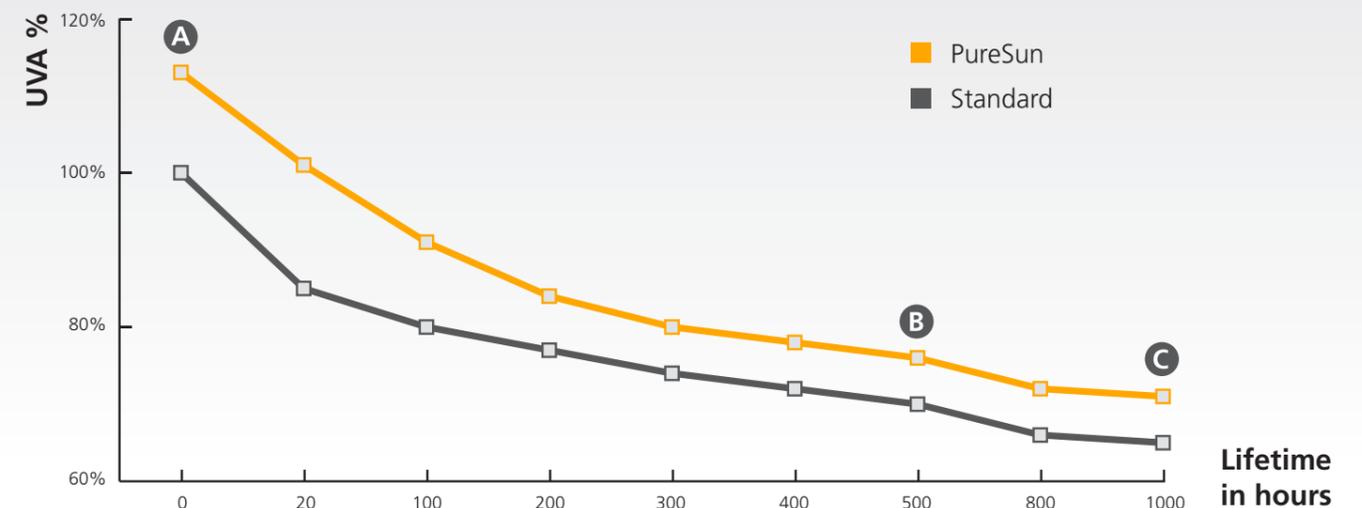

Lamp life shortens as UV levels drop further, their colour drifts and output becomes unstable.

PureSun – New technology for enhanced performance

Our new Sylvania PureSun tanning lamps start life with 12% more UV and they lose it far more slowly.

So slowly that after 500 hours they have the same UV intensity as a 'standard' long life lamp would have at the early hours of its life.

It's this dramatic improvement that makes PureSun lamps the best-in-class for UV maintenance, providing higher UVA-output for deep, longer-lasting skin darkening.

A 12% higher initial UV reading at 0hrs. Only 5% drop in UV between 0-5hrs. Best-in-class UV depreciation. Guaranteed UV stability.

B At 500hrs – we have the same UV intensity as standard 'longlife' lamps have at a much earlier stage in their life.

C At 1,000hrs – Maximum 30% loss compared to initial UVA.

Introducing PureSun The new name in sun tanning

We are pleased to introduce our new ranges of sun tanning lamps that will meet all your requirements.

PureSun™

100W 1.0% R

100-R-34/3.9 FOR EU

Sunlamp DANGER: Ultraviolet radiation. Follow instructions. Use ONLY in fixture equipped with a timer.

- WATTAGE CODE**
Nominal wattage of the recommended ballast which is used for the measurement. It can be different than the ballast in the application.
- REFLECTOR CODE**
- O for non-reflector lamps
- B for lamps with broad reflector angle $\alpha > 230^\circ$
- N for lamps with narrow reflector angle $\alpha < 200^\circ$
- R for lamps with regular reflector $200^\circ \leq \alpha \leq 230^\circ$
- X CODE**
 E_{er} [mW/m²] Total erythema irradiance over range 250nm-400nm
- Y CODE**
 $E_{NMSC < 320nm} / E_{NMSC > 320nm}$ ratio of the NMSC effective.
- EU CODE**
Shows that the lamp suitable for 0.3 regulation with high probability.

PureSun – HOT

PureSun HOT lamps are long-lasting premium products that produce considerable amounts of UVB and UVA. These lamps are strong enough to reach very short session times in any tanning equipment. PureSun HOT is designed to give your customers immediate colour using higher UVA and UVB levels.

Premium lamps with higher output, universal results and true 1000 hour life make it a major advancement in the tanning. Proprietary phosphors give a superlative tanning experience and quick results. They not only deliver an exceptional tan but offer a long service life too – you can expect this from all PureSun lamps.

PureSun – Gentle

PureSun is designed to tan gently, within the limits set by EU regulations governing all types of tanning equipment. Based on scientific research, these limit photo-biological irradiance values to 0.3 W/m², which is equivalent to the summer sun at midday in the Mediterranean. In other words: the safe, maximum level is what we have evolved to enjoy, naturally.

PureSun's long-lasting UV stability guarantees constant session times even after hundreds of hours. And PureSun operates at the precise spectrum of wavelengths required for maximum tanning effect, but with reduced irradiance. So, it offers exactly the right balance for reliable, even and gentle tanning, time and again. Advanced design and manufacturing quality ensures that PureSun consistently outshines the competition for amazing results.

Please note: SYLVANIA tanning tubes and lamps should only be used with appropriate consideration of the type of equipment in use as well as the person's specific skin type. You can find details on this below.

High-altitude sun – CAUTION – Ultraviolet (UV) and infrared radiation. Please observe instructions for use. UV and infrared radiation from studio tubes carries with it a number of health risks and can cause, among other things, cancer, premature skin aging, burns, injuries to the eyes, cataracts, a weakening of the immune system, allergic reactions and injuries to the vascular system. Pregnant women and persons taking prescription or over-the-counter pharmaceuticals should consult their physician's prior to tanning in a studio. The simultaneous ingestion of such medications as sedatives, antibiotics, diuretics or lower blood pressure medications, anti-neo-plastics or contraceptives can lead to the development of sunburn more quickly because such pharmaceuticals increase the skin's sensitivity to light. The same applies to cosmetics. UV radiation can accelerate the aging process of your skin and increase the risk of skin cancer, for instance squamous cell carcinoma or basal cell carcinoma. Your skin cancer risk is greater the more often you are exposed to UV radiation. Those who do not tan under direct sunlight will usually not tan in a tanning studio either and, in addition, such persons will also expose themselves to a greater danger of experiencing the detrimental effects of tanning lamps. If you do not tan in direct sunlight, then you should avoid tanning lamps. UV exposure in childhood is suspected of favouring the formation of melanoma in adulthood. Therefore, children should not use tanning studios without check-ups by a physician.

NEVER TAN WITHOUT USING SUITABLE PROTECTION FOR YOUR EYES (UV PROTECTIVE EYEWEAR)! WITHOUT EFFECTIVE EYE PROTECTION, YOU RUN THE RISK OF SERIOUS BURNS TO THE EYE OR A LONGER TERM IMPAIRMENT OF VISION!

Use tanning lamps ONLY with a timer and in conformity with instructions from the manufacturers of both the equipment and the lamps, also in proper consideration of your skin type. Before installing the lamps or switching out the tubes, take all appropriate safety precautions and observe the instructions of the manufacturers of the tanning equipment and the light sources used.

Exclusion of liability: Havells Sylvania will not be liable for injuries resulting from the improper use of its products or from not adhering to legal and regional regulations as to the use of such products by its customers or final users. All the data presented here is the result of measurements made under standardised laboratory conditions. Details on the certification of UVA radiation and the guaranteed service life of the equipment are based on a 5-hour value and refer to operational conditions defined by Havells Sylvania. Havells Sylvania reserves the right to change this technical data without any prior announcement.

This information is not legally binding consultation and cannot replace such consultation. We recommend that you remain up-to-date in an appropriate manner as to all developments, particularly those concerning the conversion of European Guidelines into national law, e.g. by consulting a solicitor or a qualified professional association.

PURE COLLAGEN™ – PURE ANTI-AGING

The revolutionary new light for youthful skin

Collagen is a biological, autologous building block and important part of human skin which provides elasticity and strength to the skin. Fibroblasts (Collagen producing cells) continuously produce new collagen fibres. By the increased generation of Collagen fine lines are reduced, the skin is visibly tightened and the visual appearance of the skin is improved.

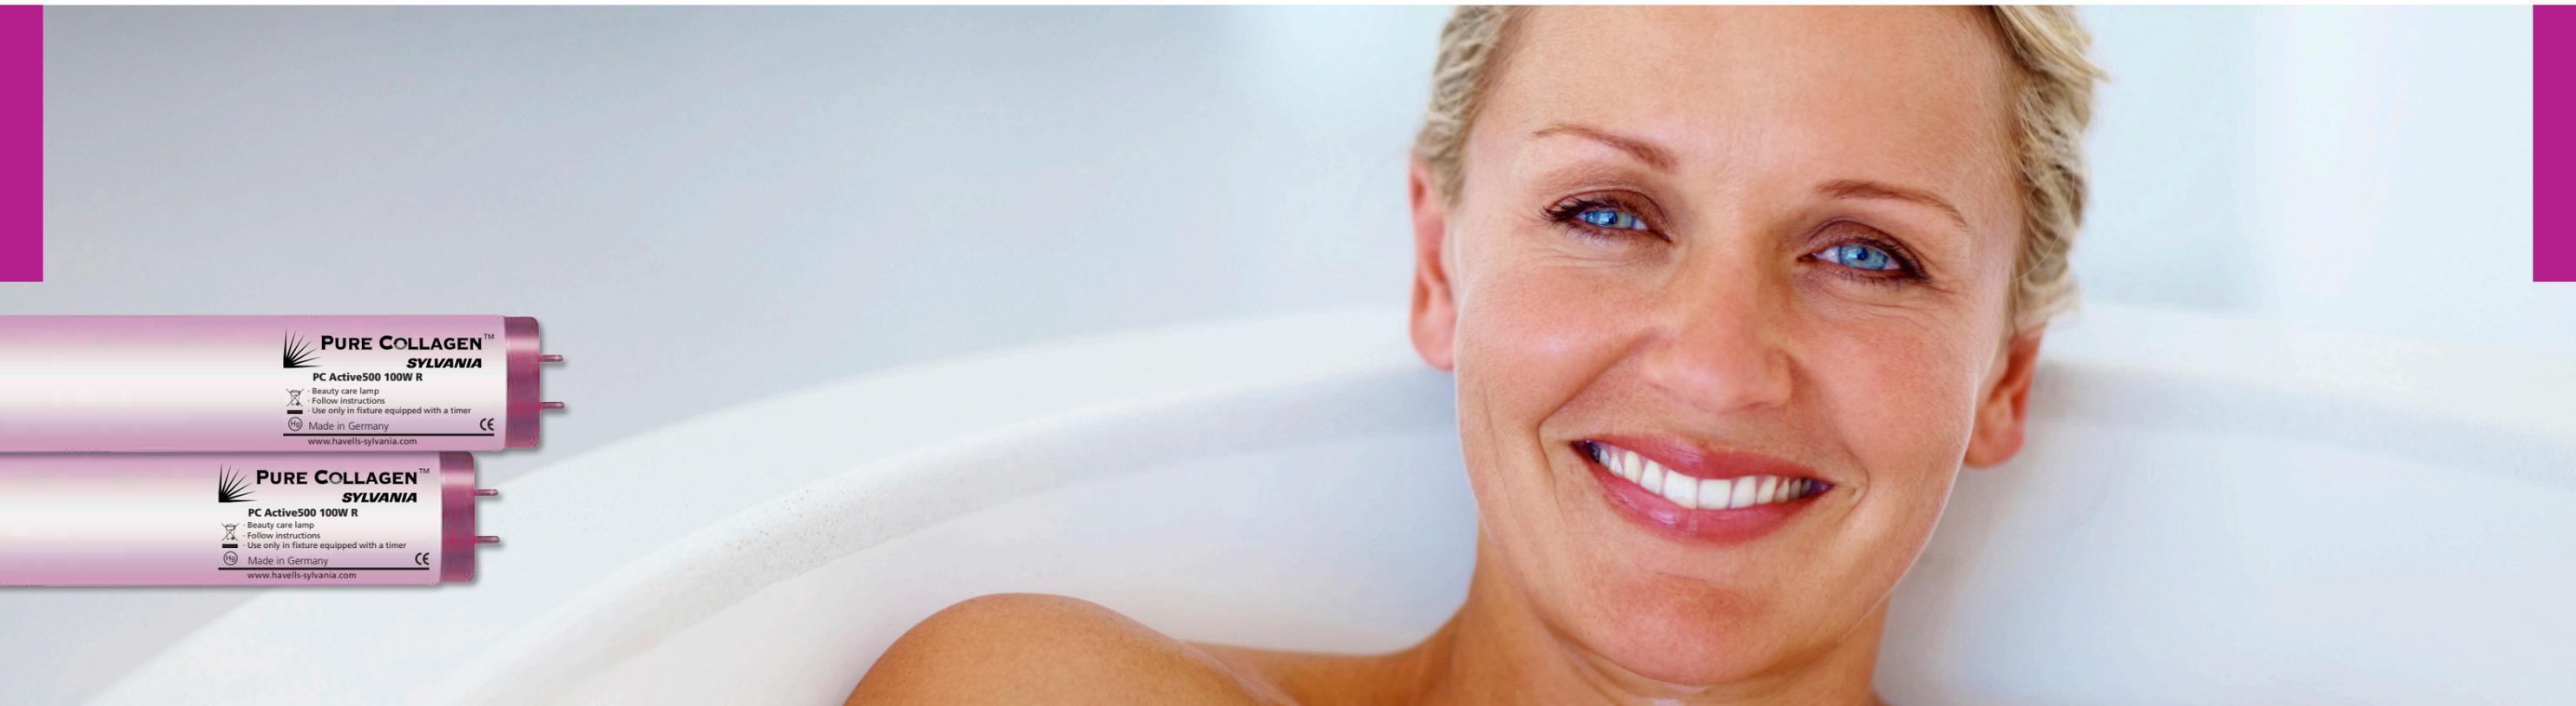

PURE COLLAGEN™ – PURE ANTI-AGING

Beauty, attractiveness and wellness

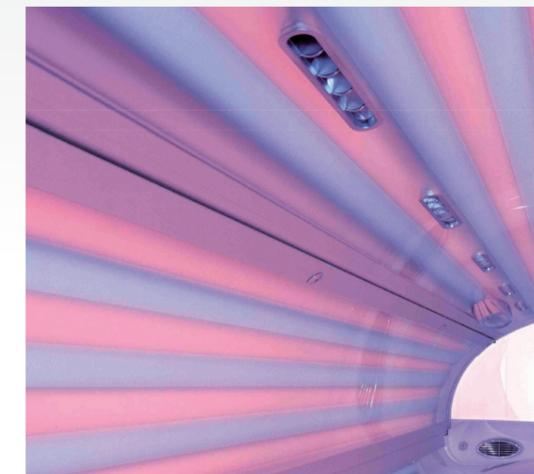

Sylvania sets a new standard in Collagen Light Therapy.

The advanced design of both high and low pressure lamps features a novel and unique spectrum. The high energy output enables the skin to support the maximum rate of collagen regeneration.
