NEW BALANCE SERIES: GENTLE & NATURAL SUN

The Ergoline Balance series ensures a particularly gentle tanning experience. This is made possible by the new Hybrid Performance system, which combines sunlight with Beauty Light. This means that, in spite of a significant reduction in UV dose, a beautiful and natural tan can be achieved. Hybrid Performance uses an intelligent combination of sunlight and Beauty Light. The typical drying effects on the skin and typical UV aroma are now a thing of the past. After tanning on the Ergoline Balance, the skin feels velvety smooth. For a particularly pleasant tanning experience. The new Beauty Select function means users can have their own individual beauty or tanning programmes.

The patented Vibra Shape fitness training is ideal for everyone who likes to make the best use of their time. The movements are gentle on the joints, promote muscle generation and improve physical mobility and co-ordination. Because the vibration training in the four fitness programmes is very simple and easy on the joints, it can also be used by older people and beginners without any difficulty. Of course the training always takes place in the privacy of an enclosed booth.

INTELLIGENT PERFORMANCE

Around the world, Ergoline is leading the way with its pioneering UV technologies. Its Optimized Performance concept with Ultra Performance Plus facial tanners has set a new benchmark among sunbeds that conform to the 0.3 W/m² standard. The Intelligent Performance technology on the Ergoline Prestige is completely new and unique to Ergoline. Intelligent Performance considers the different positions of the lamps in the tanning tunnel and adjusts the UV output accordingly to ensure an even and up to 30% deeper tan all round.

INTELLIGENT

PERFORMANCE

ERYTHEMAL UV OUTPUT / 100% 0.3 (OPTIMUM)

IDEAL UV OUTPUT

All sunbeds in Europe are capped at a maximum output of 0.3 W/m². It is measured at the point where the UV output is highest. Ideally, UV output should be 0.3 W/m² over the entire body to ensure the best possible tanning performance as illustrated by the white line in the image (left).

ERYTHEMAL UV OUTPUT CONVENTIONAL SUNBED

UV OUTPUT ON CONVENTIONAL SUNBEDS

Ideally, tanning performance would be evenly distributed throughout the tunnel. However, the actual tanning performance of conventional sunbeds deviates quite significantly from the ideal line, due to the access point to the sunbed and the differing distances between lamps and body. The sides of the body, in particular, do not tan as well.

ERYTHEMAL UV OUTPUT INTELLIGENT PERFORMANCE VS. CONVENTIONAL SUNBED

SIGNIFICANTLY IMPROVED TANNING WITH INTELLIGENT PERFORMANCE

Intelligent Performance technology considers the different positions of the lamps in the tanning tunnel and adjusts the UV output accordingly to ensure even and deep tanning of the entire body. The results on the sides of the body, in particular, are vastly improved. The marked area shows the significant tanning advantages of Intelligent Performance compared to a conventional sunbed.

--- 0.3 W/m² . . . Conventional sunbed — Intelligent Performance ■ Benefit of Intelligent Performance

LED LIGHT SHOW

Add a new highlight to your salon! Eye-catching and appealing light effects with WOW factor! More than 200 colour and light effects provide unbelievable scope for individualisation of the Ergoline Prestige series, Affinity series, Inspiration series and Balance series. Top quality high performance LEDs produce impressive, brilliant colour. Energy savings of up to 80% and a service life of more than 30,000 hours make the LED Light Show even more attractive. The new LED Interior Light adds new highlights to the interior, as well. The brightly lit tanning tunnel looks particularly hygienic and entices your customers to come and tan.

LED LIGHT SHOW

ECO TECH

Dynamic electronic ballasts, efficient LED lighting and intelligent integral ventilation guarantee superb energy efficiency. Save even more energy by adjusting the settings with Eco Tech to reduce UV power, dim the mood lighting or deactivate Climatronic or the temperature settings. You decide how much energy you want to save. Perfect for 'happy hour'.

ECO TECH

CONTROL CENTRE

The Control Centre offers your customers a level of comfort they will never have experienced before – because it sets all their individual personal tanning preferences in a flash. Your customers can then simply relax and enjoy their tanning session. Adjustments can still be made during the tanning session using the Cockpit Control within the sunbed. The integrated Professional Set-up Manager makes it easy for you as the operator to call up all equipment details and perform all settings. The large exterior display panel makes operation more convenient and easier than ever before!

CONTROL CENTER

Ergoline

NFC CONNECT

NFC Connect allows your customers to store all of their personal tanning preference settings on their customer card – so the sunbed can be immediately adjusted to their personal preferences at every visit. It can even welcome them personally! Genuine VIP status as the perfect way to enhance customer loyalty.

As the operator, you can use NFC to quickly and securely transfer all of the settings to other Ergoline sunbeds equipped with NFC Connect. You can't get any simpler than that!

NFC CONNECT

ERGOLINE TUTORIALS

The new Ergoline sunbeds offer more innovations than ever before! Our video tutorials explain these innovations in detail, giving you a convenient means of learning more about your sunbeds. Ergoline tutorials are also excellent for staff training. See for yourself – you will find our Ergoline tutorials on our website: <http://en.ergoline.de>

Ergoline sunbeds - when your business deserves the best! You will find the new showroom on our website: <http://en.ergoline.de>

OPERATION & VOICE GUIDE

Modern sunbeds offer more comfort than ever before. Ergoline has perfected its user guidance to provide your customers with an intuitive operation system.

Smart Control is a brand new feature for the Affinity and Balance ranges. The high-quality glass control panel with large display makes operation easier than ever before. In addition, Smart Control and the Control Centre in the Ergoline Prestige make it possible to select the customer's personal comfort settings before the tanning session begins. This is a real plus point, especially for new customers or those who aren't sure. The large display and the integrated Professional Set-up Manager also make it really easy for you as the operator to manage the appliance.

Ergoline has developed the Voice Guide, making it possible to operate the sunbed even with your eyes closed. The Voice Guide explains each function of the sunbed with a pleasant voice to ensure a personal touch. This means that customers are talked through each step in turn.

UV PERFORMANCE

Ergoline has ushered in a new era in UV capability with its state-of-the-art Intelligent Performance technology. The Intelligent Performance UV tanning concept achieves the most even and intense colour you have ever seen over the entire body. Adjustable electronic ballasts of the Dynamic Performance increase UV output by around 25% per watt input in constant operation, ensuring longer life for your lamps and added security for your investment. The energy saving yet highly efficient Smart Performance technology is available as Turbo, Twin and Super Power. A brand new feature is the Advanced Performance lamp technology, which has significantly improved the tanning performance of the new Ergoline Affinity range compared with previous models.

ULTRA PERFORMANCE

The 0.3 optimized Ultra Performance PLUS technology is another impressive example of Ergoline's UV expertise, with its combination of glass reflectors, additional 25W low-pressure UV-B lamps and filter glasses with an innovative coating. The computer-calculated geometry of the glass reflectors guarantees optimized reflection and transmission performance. The specially coated filter glasses ensure precise control of the active tanning UV spectrum, i.e. only the genuinely active tanning parts of the UV spectrum are allowed to penetrate, thus minimising the risk of sunburn. Additional 25W low pressure UV-B lamps arranged next to the glass reflectors perfect the sunbed's luscious tanning performance. The Ultra Performance PLUS technology has set new standards for 0.3 W/m²-compliant sunbeds, giving you substantially improved tanning and a much lower risk of sunburn.

NECK TAN & SHOULDER TAN

Your customers want a perfect all-round tan. The neck tanner developed by Ergoline brings this a whole lot closer. The additional tanning for the neck is delivered via a reflector which is integrated into the base of the sunbed. This ensures that those hard-to-reach areas at the back of the neck are optimally tanned – without any extra energy consumption! The high-pressure shoulder tanners with innovative Ultra Performance technology (that are an optional extra in all Ergoline Prestige models) provide extra tanning for the shoulder area. Shoulder tanners with seven UV lamps ensure perfect all-over tanning on the Ergoline Affinity models.

DESIGN-ELEMENTS

With Ergoline, innovative sunbeds with an unmistakable look are not just a matter of styling. Light design is the highlight of every Ergoline professional sunbed. After all, light imparts a fascinating aura. It emphasises contours, balances shapes, underscores striking looks. It creates an irresistible invitation to tan. First impressions count with a mesmerising and fascinating LED Light Display. The new LED Interior Light adds new highlights to the interior as well. Shimmering decor elements, exciting light effects and illuminated symbols are features across all our models. Just another reason why all Ergoline sunbeds have such distinctive and desirable appeal.

AQUA FRESH & AROMA

Aqua Fresh makes any tanning session a refreshing experience. A superfine mist can be activated separately for the facial and body areas. As a tanning salon operator, you can set an individual ventilation programme from the Operator Cockpit or Control Centre, with more refreshing ventilation in summer than in winter for example. The Aroma feature ensures tanning indulgence for all senses. Enjoy pleasantly fragranced air in the tanning room and tunnel for ultimate relaxation and a sense of luxury. As an added bonus, the Aroma feature neutralizes the typical post tanning UV scent.

SOUND SYSTEMS

Music makes everything more enjoyable. The 3D Sound System from Ergoline produces a sensational sound experience. The system consists of two speakers and a subwoofer. Tanning customers can hook up their Smartphone or MP3 player to the MP3 dock and listen to their favourite music. Auto Volume ensures that the volume is automatically raised up when the body fan powers up. These state of the art sound systems are equipped with Auto Play to activate the music channel as soon as an MP3 player or iPod is connected. Just plug and play. It can't get any easier! The SD card slot plays individual audio file compilations created by the salon. The sound system is operated using the classic cockpit control.

VIBRA SHAPE

The Ergoline Sunrise 488, the Essence 440, the Balance 440 and the Balance 480 add an element of fitness training to any tanning session. An efficient training session is also possible thanks to a vibrating plate incorporated into the base, which stimulates the entire muscular system. In doing so, Vibra Shape promotes muscle regeneration, energises fat reduction and improves physical mobility and co-ordination. The rhythmic oscillations of the patented Vibra Shape plate ensure a whole host of healthy effects. Moreover, the improved blood circulation intensifies the tanning results. For a perfect tan in just 15 minutes, without the typical white marks on shoulder and buttocks. The vibration training is really easy and particularly gentle on the joints, so even older people and beginners can use it without difficulty.

ERGONOMIC BASE ACRYLIC

Ergonomically shaped base acrylics are the hallmark of all of Ergoline's professional sunbeds. They ensure a relaxed position when tanning. The Multi Relax base with integrated headrest, comfortable armrests and adjustable footrests reduces pressure points and ensures the highest tanning comfort in all Ergoline Prestige models. The Body Shape base acrylic in all the Ergoline Affinity models ensures a comfortable tanning session lying on either your front or your back. The Stand-up class has handgrips to help customers find the ideal position. All other Ergoline sunbeds are equipped with ergonomically shaped Bodyform Plus or Body Form base acrylics.

COOLING TECHNOLOGY

Comfort Cooling envelopes the whole body in pleasantly cool air during the tanning session. The intelligent ventilation system with two separate air flow channels in the canopy and base automatically sets the right climate. The ventilation strength is constantly adjusted to the rising temperatures in the sunbed, but it can also be individually and variably set at any time. The Control Centre of the Ergoline Prestige even enables your customers to set their preferred intensity before the tanning session starts. The nozzles are intelligently positioned in the sunbed and the adjustable nozzle direction in the facial ventilation system makes tanning with Ergoline a refreshing experience.

AIR CONDITION

Air Conditioning and Air Conditioning Plus promise an especially cool tanning experience. Air Conditioning has a powerful air conditioner that cools the base. Air Conditioning Plus is now also available for the Ergoline Inspiration and features an additional body and head ventilation system. Both systems ensure a feeling of all-round freshness while tanning. Air Conditioning and Air Conditioning Plus can be switched on and off by the customer at any time via the cockpit control.

CLIMATRONIC/CLIMATRONIC PLUS

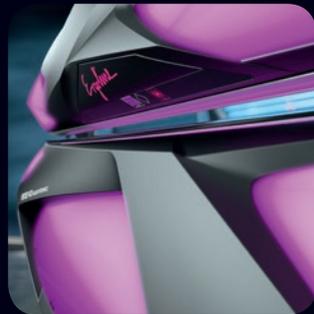

Ergoline's Climatronic function is based on a tried-and-trusted principle that has been used in the car industry. The user can set a desired temperature for the entire tanning session, kept constant by the automatic air conditioning system. Climatronic Plus ensures the desired temperature is achieved more quickly in the closed tanning tunnel and can be held constant, even given an extreme room climate. The desired temperature can be individually set in two-degree increments from 18 to 32 degrees Celsius and is shown on an LED display on the cockpit control. The integrated air conditioning unit not only cools the base acrylic but also the airflow in the tanning tunnel. Thus, the Climatronic function together with the variably adjustable intensity of the two-system body ventilation system ensures the tanning temperature suits the individual user. Just another Ergoline exclusive!
